RESEARCH INTERESTS

My research interests lie in **low-power application design**, especially **power management integrated circuits (PMIC)** and **wearable bio-energy harvesting**.

WORK EXPERIENCE

Tsinghua University
Full-time Research Assistant

Beijing, P.R.China
June 2025 – Now

EDUCATION EXPERIENCE

University of Macau
Master of Philosophy (M.Phil.) of Microelectronics, GPA: 3.56/4.0

Macau SAR, P.R.China
Aug. 2022 – June 2025

University of Electronic Science and Technology of China
Bachelor of Optoelectronic Information Science and Engineering, GPA: 3.67/4.0

Chengdu, Sichuan, P.R.China
Sep. 2018 – June 2022

PROJECT EXPERIENCE

A segment-quantity-match minimized-ripple SITO converter
• The manuscript was submitted to APCCAS 2025.

May 2025 - July 2025

A non-cross-regulation fast-transient SIMO converter
• Fabricated in a 180nmBCD process and under measurement.

Oct. 2024 - Now

A slope-fitting SITO converter for AMOLED displays
• Fabricated in a 180nmBCD process and under measurement.

Oct. 2024 - Now

An 85-230VAC input and 3.3-4.6VDC output AC-DC converter
• A Sigma-Floating-SC topology is proposed to achieve 81.3% peak efficiency and 1.52W maximum output power.
• Up to 10% increased efficiency over a large load current range, compared with prior works.
• The design is fabricated in a 180nmBCD process and the manuscript has been accepted by ISSCC 2025.

Oct. 2023 - Oct. 2024

Ultra-light-weight multi-chip easy-stacking step-up SC DC-DC converter
• The design is proposed to convert 5V voltage to 30V, 70V, and 150V to drive electrostatic and piezoelectric (PZT) actuators.
• The proposed topology combines local drivers and level-shifters together without bootstrap capacitors to reduce the driver loss.
• The design is fabricated in a 180nmBCD process and the manuscript has been accepted by CICC 2025.

Oct. 2023 - Oct. 2024

A fast-transient response single-input-multiple-output DC-DC converter
• The design utilize an auxiliary capacitor stacked with the input power source to increase the inductor charging speed and thereby improve the transient response.

Sep. 2022 - Oct. 2023

- Collaborated with 3Peak INCORPORATED.

Low-power, high transient response LDO design without off-chip capacitors *Nov. 2020 - Aug. 2021*

- Developed a bandgap with 1.2V voltage reference and 50nA current reference, whose power consumption was less than 200nW, in the temperature variation range of -40 to 125 degrees celsius.
- Developed a circuit of super positive feedback and self-bias amplifier, with static power consumption of 3-7uA and high bandwidth of 80M-160MHz.
- Won the first prize of National University Student Integrated Circuit Innovation and Entrepreneurship Competition in Southwest Division (2021).

Smartphone-based Analysis of Non-destructive Apple Brix Measurement *Apr. 2021 - Aug. 2021*

- Designed an optical system using Zemax OpticStudio to achieve Czerny-Turner Spectroscope structure using a positive (converging) lens, two spherical mirrors, a blazed grating and a linear CCD.
- Designed a CCD driver board including a Xilinx FPGA, a Toshiba linear CCD, a high-speed and high-precision ADC and so on to capture light spectra and transmit digital spectra data to smart phones.
- Programmed verilog HDL codes on Xilinx FPGA to drive CCD and ADC, besides communicating with smart phones by USB protocol.
- Won the second prize of National University Student's Opt-Sci-Tech Competition (2021).

Intelligent Biological Microscope *Apr. 2020 - July. 2020*

- Designed a multi-method of resizing and merging limited images under microscope to make up a full cell image.
- Migrated M2Det algorithm to suit the blood cell recognizing, segmentation and counting.
- Developed a dataset of blood cells with five classification including neutrophils, lymphocytes, monocytes, eosinophils and basophils.
- Won the first prize of National University Student's Opt-Sci-Tech Competition (2020) and the first prize of China-U.S. Young Maker Competition in Chengdu Division (2020).

Intelligent Device to Protect Children left in Cars *Apr. 2019 - July. 2019*

- Designed a multi-model network merged by AgeNet and Yolo-v2 to detect children left in cars.
- Used sensors such as temperature and humidity sensor, Oxygen sensor and AIoT to send data to private servers.
- Programmed a mobile app to receive warnings sent by servers to remind children's guardians of the states in cars about their children.
- Won the third prize of National University Student's Opt-Sci-Tech Competition (2019).

HONORS & AWARDS

- First Prize of National University Student Integrated Circuit Innovation and Entrepreneurship Competition in Southwest Division, 2021.
- Second Prize of National University Student's Opt-Sci-Tech Competition, 2021.
- First Prize of National University Student's Opt-Sci-Tech Competition, 2020.
- First Prize of China-U.S. Young Maker Competition in Chengdu Division, 2020.
- Third Prize of National University Student's Opt-Sci-Tech Competition, 2019.
- Third Prize of National Undergraduate Engineering Training Integration Ability Competition in Sichuan Province Division, 2019.

LEADERSHIP EXPERIENCE

Excellent President of Application Electronics Association *Sep. 2019 - Sep. 2021*

Organized lectures and competitions about electronic design and program.

Member of UESTC Linux User Group *July 2020 - July 2021*

TECHNICAL SKILLS

Circuit Design: Mixed-Signal Integrated Circuit Design, Printed Circuit Design

Programming Languages: Verilog HDL, Verilog-AMS, C for Embedded System, Python, Matlab

Developer Tools: Cadence (eg. Virtuoso, Innovus), FPGA IDE (eg. Vivado, Diamond, Quartus.), MDK-ARM, STM32CubeIDE
